GCH Offers Advanced Imaging Technology

GALION - The Radiology Department of Galion Community Hospital is now offering the latest in ultrasound technology with the purchase of the Xario™ ultrasound system from Toshiba America Medical Systems, Inc. Ultrasound imaging is a diagnostic technique which uses high-frequency sound waves to create an image of the internal organs. The procedure is painless.

“The image quality the Xario™ delivers is equal to that of more expensive systems when we compared side by side, which is a huge benefit in delivering affordable, high-quality patient care,” said Roger Bevelhymer, manager of the hospital’s radiology department. “For our radiology department here at GCH, the system’s ability to get clear, detailed images with ease and speed may eliminate the need for additional tests so we can begin treatment much sooner.”

Using advanced technology, the new equipment can produce precise detail of small blood vessels and even umbilical cords. It also eases the burden of difficult-to-scan patients, allowing for fast, comfortable exams.

Galion Community Hospital provides a full range of comprehensive services to the residents of Crawford and surrounding counties in Ohio. For more information on the facility, visit the website at www.galionhospital.org
